

The software your import and export operation runs on.

Trade ERP, customs and compliance, inventory, vessel security, and logistics. Ready platforms and custom development, for US importers, exporters, brokers, and forwarders.

WHAT WE BUILD

Every system a cross-border operation runs on.

Trade ERP

Purchase orders, shipments, documents, and true landed cost in one system built for import and export.

Customs & compliance

HTS classification, denied-party screening, duty and landed cost, and ACE-ready filing with an audit trail.

Inventory & WMS

Multi-warehouse inventory with bonded and FTZ handling, receiving, picking, and stock visibility.

Vessel & port security vision

Computer vision over cargo, containers, and the perimeter, with real-time alerts to the security desk.

Supply chain & logistics

Freight and shipment management with end-to-end visibility and the EDI and API links partners need.

Custom development

When off-the-shelf does not fit how you trade, we build the integrations, portals, and workflows you need.

Products plus custom, built by a team that knows trade.

Start on a platform

Begin with a ready Kadmoon platform and tailor it to your flow. The shortest path to software that fits.

Or build custom

A system built around how your operation works, delivered in short, reviewable cycles.

You own it

Your software and your data, in your systems, with documentation and a full handover. No lock-in.

Foreign trade is the only thing we build for. Customs, landed cost, bonded inventory, and ACE filing are our native vocabulary, not a new domain.

WHO WE SERVE

Built for the companies that move goods.

Importers & exporters

Trade ERP, landed cost, and compliance in one platform.

Customs brokers

Classification, screening, and ACE-ready filing, auditable.

Freight forwarders

Shipment and document management with a customer portal.

3PL & warehousing

Multi-warehouse inventory with bonded and FTZ handling.

Ports & terminals

Computer-vision security over cargo and the perimeter.

Manufacturers & distributors

Source, import, and distribute on one connected system.

OUR SPECIALTY

Customs and compliance, built into the software.

A shipment held at the border, or a screening you cannot prove you ran, costs real money. We build it into the core, so every order is clear and documented before it ships.

- ✓ **HTS classification & duty**
In the order flow, not a separate lookup.
- ✓ **Landed cost**
Allocated to the unit as costs arrive.

- ✓ **Denied-party screening**
On every counterparty, against current lists.
- ✓ **ACE-ready filing**
Assembled from data you already captured.

HOW IT WORKS

From your trade flow to live software.

01

Discovery

We map how goods, documents, and money move through your operation.

02

Foundation

A ready platform tailored to you or a custom base, with your integrations.

03

Build

Delivery in short cycles, each a working piece of your operation.

04

Sustain

Training, support, and compliance kept current as your trade grows.
